**For immediate release:**

## **CA TSOPLUS™ Users Face “End of Support” and “End of Life”. Transparent, Fully Supported Replacements are Available**

Hoboken, New Jersey, June 13, 2014: CA TSOPLUS™ customers facing “End of Life”-and “End of Support” can migrate to a fully supported replacement environment with TASKLIB+ and Launch Express from Relational Architects International (RAI). “RAI is working directly with CA Technologies and CA TSOPLUS™ customers to ensure a seamless and transparent migration for users” said Carl Feinberg, CEO of Relational Architects International (RAI).

TASKLIB+ and Launch Express together offer a complete solution and methodology for managing ISPF applications and the dialog libraries they require (including load libraries). “z/OS shops can dramatically improve TSO logon times while simplifying and extending their TSO/ISPF environment ” Feinberg maintained. Multiple LOGON procedures and repetitive LOGON / LOGOFF sequences can be eliminated. “Instead, shops can standardize on a single, simple LOGON procedure for *all* users” Feinberg stated. “Users can also access and switch among multiple DB2 subsystems within a single ISPF session” Feinberg continued.

TASKLIB+ and Launch Express deliver the benefits of dynamic task and step libraries and fully “dynamic ISPF” in a pair of commercial products backed by knowledgeable, responsive and professional support. TASKLIB+ implements the STEPLIBX facility of CA TSOPLUS™ while Launch Express provides full support of the On Demand Application (ODA) feature being sunsetted by CA. “TSOPLUS™ shops can transition to a fully supported solution as their maintenance terms expire” Feinberg said.

“TASKLIB+ and Launch Express install and deploy seamlessly without an IPL and run with all releases of z/OS whose IBM support status is current -- including z/OS V2.1” according to Feinberg. “TASKLIB+ and Launch Express – don't run ISPF without them!” – is Feinberg’s concluding advice.

Relational Architects International has provided best of breed solutions for DB2/z, z/OS and TSO/ISPF for nearly three decades. Its quality products and superb 24 x 365 support have made it a trusted partner in z/OS enterprise computing, with a proven record of supporting mission-critical processing for the Global 2000.
